Toledo Lucas County Homelessness Board

Carl Richard Sutherland II

HMIS Administrator

## Survey Effectiveness

The Point-in-Time survey is an important tool for fighting homelessness. As such, it is important to understand the tool. One metric is the percentage of surveys for homeless persons. Of the total number of surveys collected, fifty-four percent (54%) were for homeless persons (unsheltered and sheltered in emergency shelter on the night of the PIT). Of the total surveys collected, twelve percent (12%) were for unsheltered homeless persons; twenty-two percent (22%) of the homeless surveys collected were for the unsheltered homeless.

### Survey Statistics

	Total Collected	Total Homeless	Unsheltered
Number of Surveys	125	67	15
Percentage		54%	12%   22%

## Community Subpopulations

The Point-in-Time Survey gives the community an opportunity to ask additional questions. Questions regarding two subgroups were included in the 2016 PIT survey: Previously Incarcerated Persons and Physically Impaired Persons. The following numbers apply only to the surveys collected on January 25<sup>th</sup>, 2016 and do not reflect any data within Toledo HMIS.

### Subpopulation Statistics

	Total Homeless	Previously Incarcerated	Physical Impairments
Number of Surveys	67	15	8
Percentage		22%	53%

## Annual Survey and Sub-Population Comparisons

Below is a comparison of the collected data for 2015 and 2016. Given the limited data set, no discussions of trends is provided.
